

**We see what
you don't,
and that
opens doors
for you.**

REMOTE MONITORING FOR ACCESS CONTROL

Our alarm monitoring centre constantly keeps an eye on what is important to you. Access control measures, like doors and keys in residential homes, for example, are a fundamental security measure for a building. Special solutions are required for locations with increased security requirements, however. We keep in check who goes where and when on your behalf.

HOW DOES CERTAS VIDEO WORK?

1. Access request

Access attempt by pressing a button, badge, pin entry or calling the Certas alarm centre.

2. Verification

Access authorisation check via video image. If the access attempt is authorised and if the person provides an agreed password, the Certas employee will open the door via remote access, and if not the door remains closed. In the case of problems or in an emergency, the Certas employee initiates the measures agreed in advance immediately.

3. Access

In the case of authorised access, the Certas employee follows the path of the person via video if necessary, until they have left a previously defined zone.

4. Controlling

Reporting on the unauthorised access attempt and the measures taken if necessary.

YOUR BENEFITS OF THE TWO TRANSMISSION SOLUTIONS FOR VIDEO

Cloud solution

- Simple, flexible cloud
- Cameras of a European brand (Axis)
- Secured with SSL certificate
- Swiss development (cloud in Switzerland)
- Low cost, as no VPN is required

Virtual Private Network (VPN)

- Suitable for high security standards
- Transmission via secured connection
- Security through special hardware
- Plannable due to recurring costs
- Support by exclusive suppliers

YOUR BENEFITS

The Certas alarm centre is manned by people who decide and act exactly according to the agreed measures. By accessing the video stream and comparing the reference pictures, we can ensure, in addition to the locking system (key, badge), that only authorised persons are granted access. The dual control principle is thus deployed remotely.

Certas only accesses the cameras after the signal notification (call for access) has been received. After the incident has terminated, the video channel is closed immediately. We adhere to the applicable Swiss data protection laws and the basic data protection regulations of the European Union.
